Landscaping...

Your questions answered!

We have gathered the most frequently asked questions with respect to Landscaping, Final Inspections and deposit refunds. We hope this compilation assists you in the process of completing your landscaping.

Mariah Consulting Limited

This booklet is comprised of general questions and answers in an effort to provide information.

Each neighborhood has landscaping guidelines that are specific to the neighborhood and stage that must be referenced for your specific requirements.

If you do not have a copy of these guidelines please contact your builder so that they may provide you with the necessary information.

Question	Answer
1. What is the Final Inspection for?	A single Final Inspection is done to confirm compliance with architectural guidelines, satisfactory completion of landscaping, and record any damages to curbs, sidewalks, street furniture, and water valve. The Builder has the landscaping security deposit and will refund this deposit to you upon satisfactory completion. Partial refunds will not be considered.
2. What is required to request a Final Inspection?	The following elements should be present prior to requesting a Final Inspection: > Completion of construction > City Approval of grading, rough or final grade, specific to the neighbourhood > Completion of landscaping in accordance with requirements (available from your builder) > Sidewalks and curbs cleaned, c.c. (water main valve) exposed and marked.
3. Why is it my responsibility to ensure the Water Valve (cc) is marked and exposed?	Your builder is responsible to locate, mark and expose your Water Valve during the construction process, as this is the "on/off" switch to the water into your home. However, once you have taken possession of your home it is the homeowner's responsibility to ensure that the Water Valve remains marked and exposed to ensure easy access.

Question	Answer
4. Can I send my request for Final Inspection directly to your office?	No, we cannot accept Final Inspection requests from anyone but the applicant on file, in this case the Builder. Because we are also inspecting for compliance of the Architectural Guidelines as well as damages to the curbs or sidewalks it is imperative we receive the request from and subsequently report our findings to the Builder. This process facilitates
	the prompt refund of your deposit. Where deficiencies are found and a re-inspection
	is required, the request must also be made by the builder.
	A second re-inspection to verify compliance is done at no charge to the Builder or Homeowner. However, a third re-inspection will result in a charge of \$250.00 to be deducted from the landscaping deposit.
5. When will my Final Inspection be done?	Final Inspections are done during our regular presence in the neighbourhood, which is approximately once a month and subject to weather conditions.
	If your builder's request is received in our office just prior to our scheduled presence, the response will be immediate. If your request is received just after our scheduled presence, you may wait up to four weeks. The report of our findings will be forwarded to your builder.
6. Are Final Inspections conducted all year round?	Final Inspections are only done during the growing season, which varies from year to year. Generally speaking the growing season is from May to October. It is important to note that if your request for Final Inspection is received in our office after September 1 st , inclement weather may result in the delay of the inspection until the following growing season.

Question	Answer
7. Does my fence have to be completed prior to requesting my Final Inspection?	Fencing does not have to be completed at time of Final Inspection. As there are specific requirements for fence style and color, please ensure you do have a copy of the fencing detail prior to proceeding with construction of your fence. A copy is available from your builder.
8. Can my landscape plans be reviewed prior to proceeding?	It is not the purpose of this process or our area of expertise to review or to approve landscaping plans prior to implementation.
9. What if I don't think there is enough room to plant a tree(s) in my front yard?	Although it may appear there is not room for a tree, especially on a narrow pie shaped lot, it is rare that this is the case.
	Generally, trees may be hand dug within 1 meter of the utility lines. Ultimately, the location and planting of trees is the responsibility of the homeowner in consultation with the appropriate governing utility authorities and the landscaper. It is not the responsibility of your Builder, the Developer or the Consultant.
	Generally the size of root ball differs from one species to the next by only 2 to 4 inches and should be planted in a hole approximately 3 feet wide and two feet deep. This being the case, you should not be restricted from placing a tree(s) that meets the requirements for your neighbourhood.
	Where there are two trees required to meet the minimum landscaping requirements, and it is determined that there is only space for one in the front yard, the developer may permit the second tree to be planted in the rear yard.
	cont'd

Question	Answer
9 Cont'd What if I don't think there is enough room to plant a tree(s) in my front yard?	If you are challenged by space constraints and/or utility locations, you need to: > Contact "Call Before You Dig" to have the utility locations identified and a report will be provided to you noting their locations. > Review the locations and options available to you with your landscaper. > Explore the species of trees suited to the challenges of your lot such as a Columnar Aspen. If after exploring all options available to you it is determined that it is not possible for you to plant the required tree(s), you will need to assemble the following information and submit to our office for review: 1. Utility Plan - The original colored copy or a color photocopy of the original. 2. Copy of your plot plan illustrating your proposed landscaping in detail. i.e. location of planting and specifics of plant material proposed. 3. A return fax number or mailing address for our written response.
10. What is a prepared shrub bed?	A prepared shrub bed is defined by edging, which may be vinyl, block, stone, or concrete. Shrub beds are intended to create mass, but may be planted in more than one site if preferred.
11. What would be considered a shrub?	The definition of a shrub is: A horticultural rather than strictly botanical category of woody plant, distinguished from a tree by its multiple stems and lower height. Shrubs or bushes are generally broad-leaved, the smaller conifers being classed as evergreens. When clipped, shrubs have dense foliage and many small leafy branches growing close together.

Question	Answer
12. Where sod is required, how much of my yard has to be covered to meet the requirements? See Appendix A for	Requirement for sod means hard landscaping must be restricted to tree and/or shrub beds. Sod must be installed on the entire front yard to the fence tie backs (to the front corner of the house and front corner of the garage).
illustrations.	Side yards at the driveway may be finished in rock or mulch rather than grass. In the case of a corner lot, any portion of the side
	yard not hidden by an existing woodscreen fence is considered to be the front yard and must be landscaped.
13. Can I seed my yard instead of installing sod?	Seeded grass is not permitted; sod must be installed for a mature finished yard.
14. What is a deciduous tree and how is it measured?	Deciduous trees have leaves and are measured by calliper or the width at the thickest part of the trunk of the tree. Standard measurement is taken approximately 6 inches up from the root ball before planting or up from the ground once planted.
15. What is a coniferous tree and how is it measured?	Coniferous trees are evergreens such as a pine, spruce or fir tree and are measured by height. Standard measurement is taken from the grass surface once planted.

Question	Answer
16. Is a Cedar or Juniper considered a tree?	Cedars and Junipers are not considered trees but are defined as coniferous shrubs. They will not satisfy the requirement for a tree(s). They require sheltered space beside the house or a fence to thrive and are seldom viable in an open yard or on their own. Your local greenhouse may suggest these conifers as an option for the required tree(s). We caution you that this is not a conflict of information as the intent and interpretation of the guideline requirements is determined by the Developer. If you plant a cedar or juniper rather than a coniferous tree(s) (spruce, pine, fir) your landscaping will not be approved. For further clarification you may reference the following sources for definition of pyramidal, columnar and global cedars, as shrubs: "University of Alberta Woody Ornamentals for the Prairies" by Hugh Knowles "Alberta Yards and Gardens" published by
17. Can I do rockscape or hard surface landscaping?	Alberta Agriculture Check with your Builder or refer to the guidelines applicable to your neighbourhood. Where the guidelines indicate that "hard surface landscaping may be permitted", it is the homeowner's responsibility to obtain professional advice on how to achieve the desired look while still meeting the landscaping requirements to achieve greenery in all front yards within the neighbourhood. The use of hard surface landscaping therefore requires the planting of additional shrubbery and/or trees to visually soften the hard surface and achieve greenery. Hard surface landscaping will require a variety of rock sizes, as well as variation in contours and materials for interest. Red shale and white landscape rock will not be permitted. Landscaping plans will not be reviewed prior to implementation.

Question	Answer
18. There is already a tree(s) in my yard. Can I count this tree as part of my landscaping to meet the requirements?	No. The Developer places these trees and although it may appear they are on your property, they have been planted on the boulevard, which is City property. Not all boulevards are separated from your property by a sidewalk and are actually a portion of the front of what appears to be your yard. These trees do not satisfy the minimum
	landscaping requirements for your yard.
19. What if my tree(s) or shrubs die before the inspection is conducted?	Plant materials that are dead or dying will not be considered to satisfy the minimum requirements.
20. My neighbour's tree(s) doesn't meet the requirements and they got their money back, why can't I?	The landscape requirements are minimum standards. We endeavour to apply the requirements consistently and fairly using our allowed discretion for a tolerance in tree size of up to $\frac{1}{4}$ " on deciduous trees and 6" for coniferous trees if all other elements meet or exceed the minimum standards as set out in the Architectural Guidelines. Inspections conducted on properties other than your own will not be discussed.
21. The greenhouse does not have any trees large enough to meet the minimum requirement for my landscaping?	Local greenhouses carry a limited selection of trees and for ease of transport, they are generally smaller in size. You should contact the tree farms in the area for a larger selection of species and size. The minimum requirement will not be waived or relaxed due to availability. It is a good idea to shop earlier in the season for the best selection.

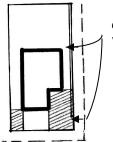

Question	Answer
22. I have spent a lot of money completing my landscaping and feel it far exceeds the average yard in my neighbourhood, but I failed my Final Inspection! Why?	The guideline requirements established for the community are in place to ensure that a specific standard of planting will be carried through the development. Although the landscape design you have chosen is perhaps more esthetically pleasing than neighbouring properties, compliance is still necessary and the minimum standard tree planting must be incorporated. The planting of additional material and landscape features does not satisfy the requirement for a tree(s) of minimum standard.
23. What if I choose not to meet the minimum landscaping requirements? What will happen?	You will forfeit any deposits paid to the Builder and where a caveat has been filed against your property, it will not be discharged.
24. What happens to my deposit if I exceed the timeframe set out in the guidelines to complete my landscaping?	The time limit in the guidelines is intended to provide an incentive for the timely completion of landscaping. The requirement is not intended to be punitive. We understand that there can be delays in the landscaping process due to weather and seasonal issues, in which case the time line would be reset. For example where your rough grade is not obtained in time for you to complete your landscaping in the current growing season, your time line would automatically be reset to have the landscaping completed by the end of the next growing season. Upon satisfactory completion of your landscaping, any monies owing to you will be refunded by your builder.

Question	Answer
25. If I have questions	Your builder is your contact for any and all
regarding the process or	questions or concerns regarding this process. It
status of the final inspection	is their responsibility to provide you with the
who should I contact?	information required.
	Stop by the Showhome in your neighbourhood to obtain copies of the information you will need.
